CARE GUIDE

PREVENTATIVE MAINTENANCE

Simple habits that help blinds work well, look better and stay safer.

A practical routine for rental properties

1

AT HANDOVER

Show how each blind operates. Give care and safety information. Keep cords and chains secured.

2

AT ROUTINE INSPECTIONS

Check operation, fabric, rail, brackets and safety devices. Note any changes with a photo.

3

WHEN A FAULT APPEARS

Stop forcing the blind. Record the problem early and arrange a repair assessment.

Care by product

Match the product code before using any cleaning product.

ALL	Gently dust with a feather duster, microfibre cloth or soft brush. Spot clean lightly; do not scrub or use abrasive tools.
TP200	Shaw Duo Light: gentle dry dusting or a lightly damp soft cloth only. Do not apply the chemical-cleaning instructions for other fabrics.
TP100 / TP300 / TP400	Use the product-specific directions in the Real Estate Blinds Care & Warranty Guide before any spray or mould treatment.

KEEP OPERATING PARTS HEALTHY

Operate blinds gently and evenly. Keep the travel path clear. Watch for new resistance, uneven rolling, loose brackets, damaged controls or frayed cords. Report small faults before repeated use worsens them.

CORD AND CHAIN SAFETY IS ONGOING

Keep loose or looped cords secured and out of children's reach. Keep cots and climbable furniture away from corded window coverings. If a safety device becomes loose or missing, stop use and arrange attention promptly.
